<b>Abstract</b>	<b>v</b>
<b>Preface</b>	<b>vii</b>
<b>Acknowledgements</b>	<b>ix</b>
<b>Dedication</b>	<b>xiii</b>
<b>1 Introduction</b>	<b>1</b>
1.1 Wafersort . . . . .	1
1.2 Other Work . . . . .	6
1.3 Organization of the Dissertation . . . . .	8
1.4 Contributions . . . . .	10
<b>2 Pattern Characterization</b>	<b>13</b>
2.1 Silicon Wafer Fabrication . . . . .	13
2.1.1 A Look at Wafer Layers . . . . .	14
2.1.2 Failure Patterns—A Motivation . . . . .	18
2.2 Choosing Pattern Shapes . . . . .	21
<b>3 Generating Objects at Random</b>	<b>27</b>
3.1 Fundamentals of Statistical Pattern Generation . . . . .	27
3.2 Segment pdf's . . . . .	30
3.3 Band pdf's . . . . .	33

3.4	Disk pdf's . . . . .	38
3.4.1	Applying Constraints . . . . .	41
3.4.2	The pdf . . . . .	44
3.5	Annulus pdf's . . . . .	46
3.6	Ring pdf's . . . . .	48
<b>4</b>	<b>Calculating Feature Variables</b>	<b>59</b>
4.1	Feature Concepts . . . . .	60
4.2	Segment Variables . . . . .	62
4.3	Band Variables . . . . .	66
4.4	A-Disk Variables . . . . .	71
4.5	B-Disk Variables . . . . .	74
4.6	A-Annulus Variables . . . . .	84
4.7	B-Annulus Variables . . . . .	90
4.8	A-Ring Variables . . . . .	93
4.9	B-Ring Variables . . . . .	97
4.10	C-Ring Variables . . . . .	106
<b>5</b>	<b>Synthesizing Wafer Maps with Wafgen</b>	<b>113</b>
5.1	Generating and Re-classifying Discrete Maps . . . . .	114
5.1.1	Creating a Wafer Map at Random . . . . .	116
5.1.2	Rejecting Extreme Patterns . . . . .	116
5.1.3	Discretizing the Continuous Map . . . . .	117
5.1.4	Updating the Label . . . . .	118
5.2	A Comparison of Output with Theory . . . . .	119
5.2.1	A-Disk Area . . . . .	121
5.2.2	A-Annulus Area . . . . .	122
5.2.3	A-Ring Area . . . . .	124
5.2.4	Segment Area . . . . .	125
5.2.5	Band Area . . . . .	127

5.2.6	Conclusion . . . . .	128
<b>6</b>	<b>Standardizing Wafer Map Data</b>	<b>129</b>
6.1	Overview . . . . .	130
6.2	Circumscribing the Smallest Enclosing Circle . . . . .	132
6.3	Splitting Raw Wafer Maps . . . . .	137
6.4	Calculating Initial Standard Values . . . . .	141
6.5	Correcting for Poor Coverage . . . . .	145
6.6	Thresholding the Standardized Splits . . . . .	146
6.7	Fine Features are Lost . . . . .	149
<b>7</b>	<b>Wafer Map Classification</b>	<b>151</b>
7.1	Choosing Feature Categories . . . . .	152
7.1.1	Area . . . . .	153
7.1.2	Orientation . . . . .	158
7.1.3	Location . . . . .	159
7.1.4	Curve-Direction . . . . .	165
7.1.5	Counting Feature Combinations . . . . .	168
7.2	An Introduction to Classification . . . . .	169
7.2.1	Prototype Classification . . . . .	171
7.2.2	Nearest Neighbor Classification . . . . .	173
7.3	On Bayes Classification . . . . .	174
7.3.1	The optimal classifier . . . . .	176
7.3.2	A prototype classifier . . . . .	176
7.3.3	A feature classifier . . . . .	177
7.4	Making Datasets . . . . .	180
7.4.1	Making Prototypes . . . . .	181
7.4.2	Making Neighbor Sets . . . . .	184
7.4.3	Making Synthetic Input Sets . . . . .	188

<b>8</b>	<b>Studies with Synthetic Wafer Maps</b>	<b>191</b>
8.1	A Bound on the Bayes Error Rate . . . . .	192
8.1.1	Method . . . . .	194
8.1.2	Results . . . . .	194
8.1.3	Summary . . . . .	198
8.2	Classifying Perfect Wafer Maps . . . . .	199
8.2.1	Method . . . . .	199
8.2.2	Confusion Matrices . . . . .	200
8.2.3	Results: Shape Confusions . . . . .	202
8.2.4	Results: Area Confusions . . . . .	206
8.2.5	Results: Location Confusions . . . . .	212
8.2.6	Results: Orientation Confusions . . . . .	216
8.2.7	Results: Curve Direction Confusions . . . . .	219
8.2.8	Discussion . . . . .	221
8.3	Classifying Noisy Wafer Maps . . . . .	222
8.3.1	Method . . . . .	223
8.3.2	General Results . . . . .	225
8.3.3	Noise Results: Shape . . . . .	230
8.3.4	Noise Results: Area . . . . .	230
8.3.5	Noise Results: Location . . . . .	233
8.3.6	Discussion . . . . .	235
8.4	A Theoretical Model of Noise Performance . . . . .	237
8.4.1	A One-Map Model . . . . .	237
8.4.2	A Two-Map Model . . . . .	239
8.4.3	Applying the Models . . . . .	241
<b>9</b>	<b>Studies with Real Wafer Maps</b>	<b>247</b>
9.1	A Dataset with Real Wafer Maps . . . . .	249
9.2	Perfecting Industrial Wafer Maps . . . . .	253
9.2.1	Filling in Bit Noise—Dataset <b>DFIL</b> . . . . .	254

9.2.2	Removing Tiny Clusters—Dataset <b>DCFM</b> . . . . .	254
9.2.3	Making the Perfected Map—Dataset <b>DPRF</b> . . . . .	255
9.3	An Analysis of Noise in Industrial Maps . . . . .	256
9.3.1	Datasets . . . . .	258
9.3.2	Analysis of Noise . . . . .	261
9.4	Classifying Real Wafer Maps . . . . .	261
9.4.1	Results . . . . .	263
9.5	Data as Classifier: Explorations . . . . .	264
9.6	Using Data to Classify Data . . . . .	266
9.6.1	Datasets . . . . .	267
9.6.2	General Results . . . . .	268
9.6.3	Results by Feature . . . . .	271
9.6.4	Conclusions . . . . .	279
9.7	Data Classifies Perfect Maps + Noise . . . . .	279
9.7.1	Method . . . . .	280
9.7.2	Results . . . . .	281
9.7.3	Conclusions . . . . .	284
9.8	Decomposition of Classifier Error . . . . .	285
9.8.1	Discussion . . . . .	288
9.9	Bit Noise is Clustered in <b>DATA</b> . . . . .	289
9.9.1	Method . . . . .	289
9.9.2	Results . . . . .	291
9.10	Measuring a Database . . . . .	295
9.10.1	Pdf's of $\theta$ . . . . .	295
9.10.2	Pdf's of $b$ . . . . .	297
9.10.3	Pdf's of $r$ . . . . .	299
9.10.4	Conclusions . . . . .	300

**10 Conclusions and Future Work** **301**

10.1	Contributions . . . . .	302
------	-------------------------	-----

10.2 Future Work . . . . .	304
<b>A Bertrand's Paradox</b>	<b>307</b>
A.1 The Paradox . . . . .	308
A.2 Clarification . . . . .	309
A.2.1 Solution #1 . . . . .	309
A.2.2 Solution #2 . . . . .	311
A.2.3 Solution #3 . . . . .	312
A.3 Resolution . . . . .	312
<b>B Calculating Orientation</b>	<b>315</b>
B.1 The Orientation of a Set of Points on a Grid . . . . .	315
B.2 Derivation . . . . .	316
B.3 Solutions . . . . .	320
B.3.1 Case 1: $S_{xy} = 0$ . . . . .	320
B.3.2 Case 2: $S_{xy} \neq 0$ . . . . .	321
B.4 Solutions for Wafer Map Orientation . . . . .	322
<b>C Details of Standardization</b>	<b>325</b>
C.1 Wafer Maps as Formats and with Devices . . . . .	325
C.2 Fitting the Smallest Enclosing Circle . . . . .	332
C.3 Overlapping Raw and Standard Wafer Maps . . . . .	340
<b>D Tables of Wafer Map Classes</b>	<b>347</b>
D.1 Introduction . . . . .	347
D.2 One-Zone Prototypes . . . . .	348
D.3 Two-Zone Prototypes . . . . .	349
D.4 Three-Zone Prototypes . . . . .	352
D.5 Sample Prototypes . . . . .	356
<b>E Prior Probabilities of Datasets</b>	<b>359</b>
E.1 Adjacency figures for Three-Zone Shapes . . . . .	359

E.2	Priors of the Theoretical Uniform Distribution . . . . .	360
E.2.1	Theoretical Area Priors . . . . .	360
E.2.2	Theoretical Orientation Priors . . . . .	360
E.2.3	Theoretical Location Priors . . . . .	360
E.2.4	Theoretical Curvature Priors . . . . .	361
E.3	Priors for the Input Datasets . . . . .	367
E.4	Priors for Neighbor and Prototype Datasets . . . . .	367
<b>F</b>	<b>Details of the Noise Models</b>	<b>381</b>
F.1	The One-Map Model . . . . .	381
F.2	The Two-Map Model . . . . .	385
F.2.1	Three Proofs . . . . .	388
F.2.2	Derivation . . . . .	389
F.3	Further Model Developments . . . . .	392
F.4	Graphs and Tables . . . . .	393
	<b>Bibliography</b>	<b>405</b>
